EDUCATION:	<b>M.Sc in Computer and Information Science, University of Oregon (Graduated June 2017)</b> <i>Relevant Coursework:</i> Algorithms and Complexity, Advance Data Structures, AI, Data Science, Probabilistic Methods in AI, Distributed Systems, Software Engineering and User Interfaces <b>B.E Information Technology, University of Pune, India (Graduated May 2013)</b>	
TECHNICAL SKILLS:	<b>Programming and Scripting Languages:</b> C, C++, Python, Java, JavaScript, SQL, Matlab, R, OCaml, Bash <b>Frameworks and Development Platforms:</b> ReactJS, NodeJS, Express, AWS, Weka, Unity, Android Studio, Hadoop, Arduino, Eclipse, Visual Studio Code	
PROFESSIONAL EXPERIENCE:	<b>Graduate Research Fellow, HPCL, University of Oregon</b> July 2016 – June 2017 <ul style="list-style-type: none"><li>• Worked as a research member, at the High-Performance Computing Lab (HPCL), on extending AutoPerf and TAU functionalities for auto-tuning performance of simulation of large-scale scientific experiments with Dr. Boyana Norris, a project funded by the Department of Energy (DoE)</li><li>• Used Python and Shell scripting for tracing and sampling data from experiments conducted on Edison- the NERSC supercomputer and used Machine Learning techniques to provide code improvement suggestions</li></ul> <b>Graduate Teaching Fellow, University of Oregon</b> Dec 2015 – June 2016 <ul style="list-style-type: none"><li>• Taught students HTML/CSS and JavaScript as part of the CIS 111 - Introduction to Web Programming course under Prof. Patrick Holleran</li><li>• Taught students to program Raspberry Pis using Python as an introduction to IoT as part of the Hands on with Internet of Things(IoT) course under Prof. Stephen Fickas</li></ul> <b>Software Engineer, Accenture</b> Oct 2013 – Dec 2014 <ul style="list-style-type: none"><li>• SAP ABAP Technical Analyst - Performed analysis and code changes in ABAP programming to correct functionality and usability issues related to the system. Successfully resolved over 50 critical system related issues affecting the client's business</li></ul>	
PROJECTS:	<b>Internet of Things – Cluster controlled autonomous vehicles</b> <ul style="list-style-type: none"><li>• Developed a IoT system that allows Arduino based Ringo robots to work in communication with a central server (MQTT). Used Ricart-Agrawala and Supervisor-worker algorithms to develop the system</li><li>• Developed using Python, Raspberry Pis to form the cluster and Arduino for robot programming to simulate autonomous vehicles</li></ul> <b>Virtual Buttons – Android app</b> <ul style="list-style-type: none"><li>• Created an Android application using Unity and Vuforia to create Virtual Buttons to interact in an augmented-reality setting (download here: <a href="https://github.com/rajan3012/Virtual-Buttons-in-AR">https://github.com/rajan3012/Virtual-Buttons-in-AR</a>)</li></ul> <b>YouTube Data Analyzer using Hadoop</b> <ul style="list-style-type: none"><li>• Developed a Big Data analyzer for YouTube videos using Hadoop MapReduce to obtain top viewed and top categories from around 4,000,000 records in under 10 seconds</li></ul> <b>Compiler development</b> <ul style="list-style-type: none"><li>• Built a compiler in C++ to translate from Quack, an object oriented strongly types language, to C. End project included type checking for contra/covariance, recursion support, control flow with short circuit evaluation, and full polymorphism including dynamic dispatch mimicking C++ Virtual Method Tables</li></ul> <b>Face recognition using PCA, SVM and SOM</b> <ul style="list-style-type: none"><li>• Developed a MATLAB project to study various approaches used to address the face recognition problem like Principal Component Analysis(PCA), Support Vector Machine(SVM) and Self-Organizing Map(SOM)</li></ul> <b>Simulation of Random Walk using MPI</b> <ul style="list-style-type: none"><li>• Designed and implemented a parallel Random Walk Simulation in C++ that calculated an iteration of multiple random walks over a big graph data set with 10,000,000 edges in 20 seconds</li></ul>
